Start Date : 20/01/2023 End Date : 22/01/2023

Topic : Design and Characterization of Novel Sustained Release Gastroretentive Gemifloxacin Floating Tablets Using Effervescent System.

Co-Authors : N.A.

Souvenir : N.A.

Brief Description : The present study was emphasized to develop a gastroretentive sustained release drug delivery system. The HPMC K100M and Carbopol 940 were used as release retarding polymers and the sodium bicarbonate (NaHCO<sub>3</sub>) and calcium carbonate (CaCO<sub>3</sub>) as a gas generating agent. Preformulation studies involving description, solubility analysis, and melting point determination of the drug were found to be comparable with the standard. All formulation showed satisfactory results with respect to floating lag time, total floating duration, swelling ability and sustained drug release rates. The significant increase in percent swelling of the tablet was observed with the increasing concentrations of HPMC K100M.

### **1) Natural Products in the management of schistosomiasis.(17/03/2023)**

Co-Author : N.A.

Evaluated By : N.A.

Description : This chapter consists of a brief introduction on schistosomiasis and the importance of various natural products in the management of schistosomiasis. Current treatment of schistosomiasis includes chemotherapy and prevention by praziquantel as a single medicine; additionally, oxamniquine is a prodrug used exclusively when praziquantel therapy fails. Natural products offer a source of new drugs to be developed for treatment of schistosomiasis.
